PATENT PENDING

Bee C Hive Stands

In constructing this stand, I have been able to successfully combine some older, proven practices with a more modern approach to design. The stands are currently constructed out of 14 gauge, 1 ½ square tubing and come in multiple sizes (stands hold 1 to 6 hives). The hive stands are elevated 18 ½ inches off the ground and have a built in footing which can be filled with vegetable oil. The oil is used to create a reservoir; inhibiting ants and other unwanted pests from entering the hive. Each stand is designed to allow for 24 inches per hive. For instance, a two hive stand is 48 inches from end to end. This allows adequate spacing between hives and even leaves some work space for those tending to the bees.

Protecting your Investment

In order to gain optimal stability, we have designed our hive stands to be a little more than twice the width as they are tall. This design, along with a tie down or two, will help better protect your bees and their hive bodies against natural events and human errors.

Along with helping protect the beehive against unwanted pests, when filled with vegetable oil, these 4 ¼" square reservoirs also provide an optimal footprint to support the weight of your investment while allowing the hive stand to settle evenly.

Additional Benefits

Bee C Hives Stands are elevated 18 ½” off the ground to not only to help protect your bees but also provide some relief from the discomfort that continual bending over creates. Hence, making Bee C Hive Stands a more ergonomic, beekeeper friendly design.

These hive stands were designed with the intention of being seen in the hobbyist beekeepers backyard. We wanted the stands to compliment the usual colorful hive bodies and turn an ordinary bee yard into something that owners could be proud of and want to display.

Blue Collar Products by Design is a small, owner-operated business which began with a desire to provide the average person a quality product at a reasonable price. There is a tremendous amount of pride taken in the quality of work performed and I always strive to go above and beyond the customers' expectations.

If you're anything like me, you absolutely hate to buy a product only to find that it needs replacing just a few months or years down the road. And, unfortunately, many times we find ourselves spending large sums of money on items that we know are not going to last. Yet, even though I like to use the saying, "Do it once and do it right", I certainly don't like to go broke doing it. That is why **Blue Collar Products by Design** was created and is now here to offer a wide array of products that will last you a lifetime without gauging your pocketbook.

Ultimately, it is my goal to get back to the basics....To provide quality products, built right here in the USA, which are made to last and offer them to you for a very reasonable exchange of your hard earned money.

About the Owner

My name is Eric Scotti. I was born and raised in Texas and I consider myself to be a hardworking, honest, dependable man who revolves his life around family. And, although I am a typical 'blue collar' man and have worked hard for everything I have, I honestly wouldn't have it any other way. I will admit, though, that as I grow older I do prefer some of the finer things in life but I simply refuse to pay the outlandish prices that big businesses ask for them. Therefore, I have taught myself, mostly by trial and error, how to create some of the things I want in order to save money. This has certainly led to many challenges but I wouldn't take for where it has gotten me. However, now I would like to expand on my efforts and offer other hard working individuals the opportunity to buy a quality product for a working man's salary as well.
